Research Interests

Machine Learning, Artificial Intelligence, Computer Vision, Remote Sensing, Data Analytics

Summary

Data Science undergraduate interested in research at the intersection of artificial intelligence and real-world data problems. Experienced in building machine learning applications, geospatial analysis tools, and AI-driven data systems. Seeking research opportunities to contribute to data-driven solutions in machine learning, computer vision, and geospatial intelligence.

Education

B. Tech – Computer Science and Engineering (Data Science), Vignana Bharathi Institute of Technology (2023–2027) – CGPA: 8.2/10

Intermediate (MPC), Narayana Junior College – 92.8%

SSC, Narayana High School – 100%

Technical Skills

- Programming: Python, R, SQL, C
- Machine Learning: Scikit-learn, TensorFlow, PyTorch
- Data Analysis: Pandas, NumPy
- Computer Vision: OpenCV, Image Processing
- Data Visualization: Matplotlib, Seaborn, Power BI, Tableau
- Tools: Git, Jupyter Notebook, Google Colab, VS Code, SQLite

Projects

Urban Growth Detection Using Satellite Imagery

- Built a geospatial analysis system to detect urban expansion using satellite imagery.
- Applied remote sensing indices (NDVI, NDBI, MNDWI) for land-use classification.
- Used Google Earth Engine with Landsat datasets for satellite data processing.
- Developed a web interface to visualize urban growth patterns.
- Technologies: Python, Google Earth Engine, Flask, HTML, CSS, JavaScript

DataQueryAI – Natural Language Data Query System

- Developed an AI application allowing users to query tabular datasets using natural language.
- Integrated TAPAS transformer model for table-based question answering.
- Built an interface for dataset upload, preview, and automated query responses.
- Technologies: Python, Streamlit, Pandas, SQLite, HuggingFace Transformers

Velocity Suite – Market Intelligence Platform

- Built a full-stack platform for collecting and analyzing real-time web data.
- Implemented automated web scraping pipelines with structured data validation.
- Designed a dashboard displaying market insights and analytics.
- Technologies: Python, Node.js, FastAPI, Playwright, SQLite, Tailwind CSS

Plant Disease Detection System

- Developed an end-to-end ML pipeline to identify 8+ distinct crop diseases using leaf images.
- Implemented HOG feature extraction and optimized Random Forest and SVM classifiers for high accuracy.
- Built an interactive Flask web application with real-time image analysis and glass morphism UI.
- Integrated a dynamic knowledge base providing automated symptoms, prevention, and treatment advice.
- Technologies: Python, Flask, scikit-learn, OpenCV, HOG, JavaScript, CSS3

Certifications

- AWS Academy Graduate – AWS Cloud Foundations
- Python Programming Certification – Cisco
- C Programming Certification – Cisco
- GenAI Powered Data Analytics Job Simulation – Tata Group (Forage)
- Technology Job Simulation – Deloitte Australia (Forage)

Activities

- Member – Computer Society of India (CSI)
- Member – Institution of Engineers (India)
- Member – Robotics Club, Vignana Bharathi Institute of Technology
- Participant – GenAI Hackathon organized by Google Developer Groups and other innovative hackathons.

Languages

- English – Professional
- Telugu – Native
- Hindi – Conversational
